EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Allen Turner on 11/05/2004.

The application has been amended as follows:

Replace Claim 1

1 (Amended) A method for motion searching each macroblock of a video frame, comprising iteratively decreasing block size until a rate-distortion (RD) has been minimized and selectively reducing the number of block sizes searched, wherein said motion searching each block of said video frame comprises:

performing a motion search on said video frame relative to a previous video frame using 16x16, 8x16 and 16x8 block sizes',

calculating a rate-distortion (RD) for each of said 16x16, 8x16 and 16x8 block sizes;

if said calculated RD is lowest for said 16x16 block size, motion search is complete,

otherwise continue;

performing a motion search on said video frame relative to said previous video frame using an 8x8 block size;

calculating a RD for said 8x8 block size;

if said calculated AD for said 8x8 block size is not lower than said calculated RD for said said 16x16, 8x16 and 16x8 block sizes then said motion search is complete,

otherwise continue;

performing a motion search on said video frame relative to said previous video frame using 4x8 and 8x4 block sizes;

calculating a RD for said 4x8 and 8x4 block sizes;

if neither of said calculated RDs for said 4x8 and 8x4 block sizes is lower than said

calculated RD for said 16x16, 8x16, 16x8 and 8x8 block sizes, then said motion search is complete, otherwise continue;
performing a motion search on said video frame relative to said previous video frame using a 4x4 block size; and
determining a block size with lowest calculated RD and motion search is complete.

Cancel claim 3

In claim 4 after claim replace 3 with 1.

In claim 8 after "Compensated errors" add --

wherein said performing said motion search on each macroblock of said video frame comprises:
performing a motion search on said video frame relative to a previous video frame using 16x16, 8x16 and 16x8 block sizes;
calculating a rate-distortion (.RD) for each of said 16x16, 8x16 and 16x8 block sizes;
if said calculated RD is lowest for said 16x16 block size, motion search is complete, otherwise continue,
performing a motion search on said video frame relative to said previous video frame using an 8x8 block size;
calculating a RD for said 8x8 block size;
if said calculated RD for said 8x8 block size is not lower than said calculated RD for said said 16x16, 8x16 and 16x8 block sizes then said motion search is complete, otherwise continue;
performing a motion search on said video frame relative to said previous video frame using 4x8 and 8x4 block sizes;
calculating a RD for said 4x8 and 8x4 block sizes;
if neither of said calculated RDs for said 4x8 and 8x4 block sizes is lower than said

Art Unit: 2613

calculated RD for said 16x16, 8x16, 16x8 and 8x8 block sizes, then said motion search is complete, otherwise continue;
performing a motion search on said video frame relative to said previous video frame using a 4x4 block size; and
determining a block size with lowest calculated RD and motion search is complete.--

Cancel Claim 11

In Claim 15 after "compensated errors" add --
wherein said performing said motion search on each macroblock of said video frame further comprises:
performing a motion search on said video frame relative to a previous video frame using 16x16, 8x16 and 16x8 block sizes;
calculating a rate-distortion (RD) for each of said 16x16, 8x16 and 16x8 block sizes;
if said calculated RD is lowest for said 16x16 block size, motion search is complete, otherwise continue;
performing a motion search on said video frame relative to said previous video frame using an 8x8 block size;
calculating a RD for said 8x8 block size;
if said calculated RD for said 8x8 block size is not lower than said calculated RD for said 16x16, 8x16 and 16x8 block sizes then said motion search is complete, otherwise continue;
performing a motion search on said video frame relative to said previous video frame using 4x8 and 8x4 block sizes;
calculating a RD for said 4x8 and 8x4 block sizes;
if neither of said calculated RD's for said 4x8 and 8x4 block sizes is lower than said calculated RD for said 16x16, 8x16, 16x8 and 8x8 block sizes, then said motion

search is complete, otherwise continue;
performing a motion search on said video frame relative to said previous video frame
using a 4x4 block size; and
determining a block size with lowest calculated RD and motion search is complete.--
